

## Intermediate Microeconomics (Fall 2023)

Lecture 4  
Consumer Choice

## Part I

**Budget** – Constraints that \_\_\_\_\_ face as a result of \_\_\_\_\_  
\_\_\_\_\_. Determined by

- \_\_\_\_\_
- \_\_\_\_\_

- **Budget Constraint (also called Budget Line)** – All \_\_\_\_\_  
\_\_\_\_\_ of goods for which the \_\_\_\_\_  
of \_\_\_\_\_ is \_\_\_\_\_ to \_\_\_\_\_.  
⇒ \_\_\_\_\_

Rearrange algebra

⇒ \_\_\_\_\_

- Budget line is the \_\_\_\_\_ between \_\_\_\_\_ and \_\_\_\_\_ bundles.

- Economic Meanings of the Line

- Vertical Intercept = \_\_\_\_\_

① The \_\_\_\_\_ of \_\_\_\_\_ could be \_\_\_\_\_ if \_\_\_\_\_ is \_\_\_\_\_.

② \_\_\_\_\_.

- Horizontal Intercept = \_\_\_\_\_

① The \_\_\_\_\_ of \_\_\_\_\_ could be \_\_\_\_\_ if \_\_\_\_\_ is \_\_\_\_\_.

② \_\_\_\_\_.

- Slope = \_\_\_\_\_ = \_\_\_\_\_

Measures the \_\_\_\_\_ of \_\_\_\_\_

(the \_\_\_\_\_ on the \_\_\_\_\_):

in order to \_\_\_\_\_

\_\_\_\_\_ of \_\_\_\_\_, have to

\_\_\_\_\_

\_\_\_\_\_ of \_\_\_\_\_.

- **Changes in Budget Line**

- \_\_\_\_\_ changes: \_\_\_\_\_  
of the \_\_\_\_\_.
- $M \uparrow \Rightarrow$  Shift BL \_\_\_\_\_
- $M \downarrow \Rightarrow$  Shift BL \_\_\_\_\_
- \_\_\_\_\_ changes: \_\_\_\_\_  
and the \_\_\_\_\_.
- A \_\_\_\_\_ in the  
\_\_\_\_\_ of \_\_\_\_\_ is \_\_\_\_\_  
to a \_\_\_\_\_ in \_\_\_\_\_.

### *Exercise 1*

If prices and income in a two-good society double, what will happen to the budget line?

- The intercepts of the budget line will increase.
- The intercepts of the budget line will decrease.
- The slope of the budget line may either increase or decrease.
- Insufficient information is given to determine what effect the change will have on the budget line, but we know society is worse off.
- There will be no effect on the budget line.

**Part II**

**Consumer Choice** – \_\_\_\_\_ the \_\_\_\_\_.

⇒ \_\_\_\_\_

- Point A:
- Point B:
- Point C:
- Point D:

➤ At Point C, the \_\_\_\_\_ is \_\_\_\_\_ to an \_\_\_\_\_

•

•

•

*Exercise 2*

Utility function is given by  $U(w, z) = w^{\frac{1}{2}}z^{\frac{1}{2}}$ ,  $P_w = 1$ ,  $P_z = 2$ ,  $M = 50$ , find the best choice for a consumer.

*Exercise 3*

Monica consumes only goods A and B. Suppose that her marginal utility from consuming good A is equal to  $\frac{1}{Q_A}$ , and her marginal utility from consuming good B is  $\frac{1}{Q_B}$ . If the price of A is \$0.5, the price of B is \$4, and Monica's income is \$120, how much of good A will she purchase?

- A. 0
- B. 12
- C. 24
- D. 48
- E. 120

*Exercise 4*

Suppose your utility from consuming X and Y is expressed as  $u(X, Y) = \ln(XY)$ , where  $\ln()$  is the natural logarithm operator. Given this information, which of the following statements is NOT true?

- A. The marginal utility of X may be positive or negative depending on the quantity of X and Y consumed.
- B. The marginal utility of X does not depend on the quantity of Y consumed.
- C. The marginal utility of Y does not depend on the quantity of X consumed.
- D. All of these statements are not true.

### Part III

#### Examples of Optimal Consumer Choice

- **Demanded Bundle** – The \_\_\_\_\_ of the consumer's, i.e., the \_\_\_\_\_, of Good 1 and Good 2 at some set of \_\_\_\_\_ and \_\_\_\_\_.
- **Demand Function** – The function that relates the \_\_\_\_\_ to the different values of \_\_\_\_\_ and \_\_\_\_\_, e.g., \_\_\_\_\_, \_\_\_\_\_, i.e., for each different set of \_\_\_\_\_ and \_\_\_\_\_, there will be a different \_\_\_\_\_ of \_\_\_\_\_ that is the \_\_\_\_\_ of the consumer.

- **Perfect Substitutes**

Take the example of substituting Good 1 for Good 2 at a rate of one-to-one.

⇒ \_\_\_\_\_

⇒ Optimal choices (demand function) of Good 1:

$$x_1 = \begin{cases} \text{_____ when _____} \\ \text{_____ and _____ that _____ when _____} \\ \text{the _____} \\ \text{_____ when _____} \end{cases}$$

⇒ ① If two goods are perfect substitutes, the consumer will purchase the \_\_\_\_\_.

② If two goods are perfect substitutes and have the same price, the consumer \_\_\_\_\_ to purchase.

- **Perfect Complements**

Take the example of consuming Good 1 and Good 2 in a proportion of one-to-one.

⇒ \_\_\_\_\_

⇒ The consumer is purchasing \_\_\_\_\_ of \_\_\_\_\_, \_\_\_\_\_ the \_\_\_\_\_ are. Let this \_\_\_\_\_ be denoted by \_\_\_\_\_.

⇒ Budget constraint: \_\_\_\_\_

⇒ Solving for  $x$  gives the optimal choices (demand functions) of Good 1 and Good 2:

⇒ Since the two goods are always consumed \_\_\_\_\_, it is just as if the consumer were \_\_\_\_\_ on a \_\_\_\_\_ that \_\_\_\_\_ a \_\_\_\_\_ of \_\_\_\_\_.

- **Neutrals and Bads**

If Commodity 1 is a good and Commodity 2 is a neutral or a bad

⇒ The consumer would \_\_\_\_\_ on the \_\_\_\_\_.

⇒ The optimal choices (demand functions):

{

*Math Review: Method of Lagrange Multipliers*

---

---

---

---

where

\_\_\_\_\_ : \_\_\_\_\_.

\_\_\_\_\_ : \_\_\_\_\_.

\_\_\_\_\_ : \_\_\_\_\_ to \_\_\_\_\_

the \_\_\_\_\_.

\_\_\_\_\_ : \_\_\_\_\_ – at the

\_\_\_\_\_, \_\_\_\_\_ measures the \_\_\_\_\_

in the \_\_\_\_\_ by \_\_\_\_\_ the

\_\_\_\_\_ by \_\_\_\_\_, assuming that unit is

\_\_\_\_\_, i.e., \_\_\_\_\_

\_\_\_\_\_.

Lagrange's theorem states that \_\_\_\_\_ must \_\_\_\_\_ the

\_\_\_\_\_ :

- **Cobb-Douglas Preferences**
  - **The Exponent Representation:**  $u(x_1, x_2) = x_1^c x_2^d$

- **The Log Representation:  $u(x_1, x_2) = c \ln x_1 + d \ln x_2$**

➤ **Property of the Cobb-Douglas Preferences**

If the consumer consumes \_\_\_\_\_ units of \_\_\_\_\_

⇒ \_\_\_\_\_

⇒ \_\_\_\_\_

\_\_\_\_\_ the \_\_\_\_\_ for \_\_\_\_\_

⇒ \_\_\_\_\_

⇒ ▪ The fraction of income that the consumer spends on Good 1 is \_\_\_\_\_

▪ The fraction of income that the consumer spends on Good 2 is \_\_\_\_\_

⇒ The Cobb-Douglas consumer always spends a \_\_\_\_\_

of \_\_\_\_\_ on \_\_\_\_\_,

and the \_\_\_\_\_ of the \_\_\_\_\_ is determined

by the \_\_\_\_\_ in the Cobb-Douglas function.

⇒ It is often convenient to choose a representation of the Cobb-Douglas utility function in which the \_\_\_\_\_.

⇒ If \_\_\_\_\_, immediately interpret \_\_\_\_\_ as the fraction of income spent on \_\_\_\_\_.
